BINOM-Stand

Specifications sheet

Binom-Stand - a solution specifically designed for use with our Binom-1 loudspeaker. This corresponds to the specially selected height of latter, which allows to positioned the driver exactly at the ears of the listener. The massive construction, made from special aluminum alloy, ensures complete uncoupling of the systems from the floor. All structural elements are made of solid aluminum blocks. This solution avoids a welded joint in the design and give the possibility to mount the entire construction using screws only. The massive 20 mm baseplate provides a stable loudspeaker position on the floor. Exquisite appearance of products, in combination with anthracite anodized coating, are designed to give a new aesthetics to your interior.

Key features:

- ultimate construction made from solid aluminum blocks
- complete absence of welded joints
- assembling using screws only
- massive 20 mm baseplate
- black anthracite anodized coating
- engraved logo
- exquisite appearance
